Data-Hybrid/Enterprise

Enterprise AWS (PL2 (100))

MULTI-TB

SCALE = size of application (implies large)

SCALING = action of inc/dec size

SCALABILITY = property of software (can enhance scalability)

INFORMAL

0.3s

0.7s

$$\text{throughput} = \frac{2 \text{ req}}{2 \text{ sec}} = 1 \text{ req/s}$$

$$\text{throughput} = \frac{2 \text{ req}}{1.7 \text{ s}} = 1.176 \text{ req/s}$$

$$\frac{1}{0.7} = 1.428 \text{ req/s}$$

Amdahl's law

NOT ALL APPS CAN BENEFIT FROM THE CLOUD

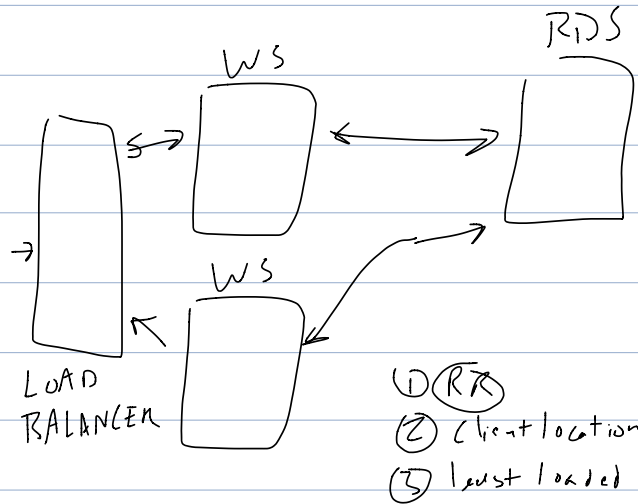

TSP

cloud?

polynomial?

factorial - aka exponential

$f(\text{complexity} + N)$

↑ PAZ Part 1
↳ Part 2 - Autoscale

1) What? U, AMI

2) Where?

3) Conditions - Up? Down?

Part 3

↳
measure
