

The Market System

Equilibrium: when plans of buyers match plans of sellers
 $Q^S = Q^D$

1. Why does gas price rise mid-year?

2. What happens to the price of gasoline when crude oil prices rise

Consumer income \uparrow ?

Crude oil $\$ \uparrow$, resource \downarrow

The Market System

Markets: bring buyers and sellers together to exchange

Market System: an economy based on voluntary exchange via markets for individual goods and services

Prices are Signals

Ex 1: Earthquake reduces supply of key resource

Desired outcome: People use less

Ex 2: New use for a commodity

Desired outcome: Firms increase commodity output

Friedrich Hayek, "The Use of Knowledge in Society"

Income \uparrow > Supply \uparrow

Gross Domestic Product (GDP): the market value of final goods and services produced in a country in a year

GDP = output = income
